

CADEC's pharmaceutical journal

Newsletter - Winter 2004 Edition

Greetings,

The entire Groupe CADEC team is proud to present this inaugural edition of the CADEC PHARMACEUTIQUE newsletter. Our intent is to regularly keep you up-to-date on our services and new developments with issues four times a year.

The Group CADEC has been a solutions company focused on processes for more than 15 years. We continue to grow and employ more than 50 people in three branches located in Montreal, Quebec City, and Sherbrooke.

Our team comprises engineers and technicians in the areas of automation, processes, industrial computers, and instrumentation. Our pharmaceutical team is current on FDA standards, processes, and good manufacturing practices, in addition to having outstanding experience in the industry. You can find out more about our services by visiting our Web site at: http://www.cadecpharmaceutical.com/en/pharma_04_01.htm

Winter 2004 Newsbrief

Groupe CADEC Has Moved!

Given the space required to carry out large-scale projects such as the integration of robot cells and palletizers, we decided to relocate to more spacious facilities from Bromptonville to Sherbrooke.

As a result, we have increased our floor space from 4,000 ft² to nearly 10,500 ft²! [Click here](#) for our new address.

21 CFR Part 11 Standard

CADEC computer specialists are proud to be able to offer you their expertise in conducting 21 CFR Part 11 compliance analyses. Whether for a production management system or building, we can analyze your systems, make recommendations, and implement any necessary corrective action.

Moreover, you can use a predesigned grid based on the standard to rapidly identify the points to be improved for compliance.

Our team has been specially trained for this purpose and has the backing of validation partners who have earned industry recognition.

Documentation Service

Don't have time to produce adequate documentation when implementing your automation projects? Turn the job over to our specialists.

Whether to handle the URS (user requirements specification) to FAT/ATS protocol, including the TM (technical manual) and UM (user manual), our pharmaceutical team has developed a series of production tools and templates to create documentation that's in step with validation activities! This simplifies validation of your systems and provides you with documentation that makes it easier to operate and maintain your equipment.

Looking for a Palletization Solution?

Let CADEC introduce you to GC-Pallet. It's a robotic palletizer solution geared to your needs.

This highly versatile cell:

- can handle up to 4 boxes at a time with independent control
- can adjust to other products.
- handles variable box sizes.
- handles up to 4 infeed and outfeed conveyors that can be installed according to your needs.
- has a multifunctional hand for handling pallets, boxes, and paperboard separators, which reduces equipment complexity.
- provides for loading the cell with cartons and pallets without stopping the equipment, which results in greater effectiveness.
- offers pattern configuration that is simple and intuitive with MOTOPALLET software.
- features user-friendly software for selecting the products to be palletized, which greatly simplifies operations.

In short, it's a simple, robust, accurate solution to improve your productivity and your competitiveness! You can find out more by contacting our sales department.

If you would like to receive additional information or would like to have your name taken off our mailing list, don't hesitate to get in touch with us at: pierre.doucet@groupecadec.com
